-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claims 4-8 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 022304.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Kozel et al 5938456.

Disclosed are housing 22 having top surface 16, a bottom surface mounted on a substrate, passageways 26 between the top and bottom surfaces, contacts in said passageways, the contacts having surface mountable tail portions 14.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kozel et al as applied to claim 1 above, and further in view of Ling et al 6575774.

Kozel et al substantially discloses the claimed invention. However, Kozel et al does not disclose standoffs. Ling et al discloses standoffs 42. Thus it would have been obvious to provide the housing 22 of Kozel et al with standoffs, to allow clearance between the housing and the substrate.

Art Unit: 2833

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kozel et al as applied to claim 1 above, and further in view of Kaufman et al 5199884.

Kozel et al substantially discloses the invention as claimed. Kozel et al, however, does not disclose surface mountable conductive panels. Kaufman et al discloses such conductive panels 76, and to provide the housing of Kozel et al with such panels would have been obvious, to better secure the housing to the substrate.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Peterson 5342221 in view of Kozel et al and Kaufman et al.

Peterson substantially discloses the claimed invention including first housing 16 with passageways 62-76 having first contacts therein; second housing 14 having poles 42-56 with wires/ second contacts therein; and deflectable latch 30. Peterson, however, does not disclose the first contacts as having surface mounting tails, nor the mounting pads. Kozel et al discloses contacts having surface mounting tails 14, and to form the first contacts of Peterson in this way thus would have been obvious, to facilitate mounting to the substrate. Kaufman et al discloses mounting pads 76, and to provide the first housing 16 of Peterson with such mounting pads thus would have been obvious, to better secure the housing to the substrate to which housing 16 is to be mounted.
